

# Blood Lead Levels of Children Under 6 In New York

According to the Center for Disease Control and Prevention, **there is no safe blood lead level in children.** Once exposure has been identified, it is important for parents or guardians to look at guidelines to avoid more exposure and to limit impacts on their child’s health. Some adverse effects of lead include problems with learning, behavior, hearing, and speech, as well as slowed growth and development, and damage to the brain and nervous system. Lead exposure can also cause more long term issues. ..
